MINING AND OIL NEWS. OPERATIONS AT STEEPLE ROCK

New Jersey Corporation at Work in a Region Well Known.

The Shamrock Mining and Milling Company, a New Jersey corporation, is operating in the Steeple Rock mining district, and according to the Duncan Arizonaan, has exceeding bright prospects for a big mining camp within a short time. George A. Kalar is general manager, and L. D. Harrigan of Newark, N. J., is president.

Mr. Kaylar and J. A. Martin of Steeple Rock originally owned and developed the mines which the new company purchased. Three hundred feet of track-
age at the mine has been completed, upon which cars have been placed for hauling ore from the tunnel.

Operating actively in the same camp are the Ash Peak Mining Co., the Twins Peaks Mining and Milling Co., the Torero Mining Co., the Shamrock Mining Co., and the American Exploration Co., whose properties are all located around Duncan, Arizona, although Steeple Rock is across the line in New Mexico. Large forces of men are at work and new buildings are being erected and new machinery installed in this live mining camp. The American Exploration Co., a Boston company, of which W. Franklin Burnham is president, is under the management of W. A. Marshall of Denver, who recently made an examination and reports its properties one of the greatest in the west. In the same camp is the old Carlisle mine with a record of producing several millions of dollars in gold and has reached a depth of over 1000 feet, demonstrating that the ore values go down. The adjoining properties of the American Exploration company, in active operation have struck an 18-foot body of ore 11 feet of which assays \$8 a ton in gold, and 7 feet of it gave returns of \$26 per ton. Mr. Burnham, when in El Paso last week, stated that a large milling and cyaniding plant will be installed on these properties.

ACTIVITY AROUND SILVER CITY, N. M.

Chino Copper Company Carrying on the Largest Operations.

The largest mining operations in Grant county, N. M., are now being carried on, says the Silver City Independent, by the Chino Copper company in its Santa Rita copper properties. Under the management of John M. Sully the grounds are being thoroughly explored, with drills and workings. The big concentrating mill will be placed on a site on the old Bruhm ranch, about four miles northeast of Apache Tejo. This ranch was recently purchased from the Victoria Land and Cattle company. The erection of the big mill will be commenced within the next 60 days and will consist of three units of 300 tons each or a capacity of 2700 tons every 24 hours.

A camp of 30 men are at Apache Tejo where the main source of water is to be secured. Recent development here has increased the flow of water three-fold, where a large pumping plant will be installed. The cost of the mill and pumping plant will exceed \$1,000,000.

Drills Operating.
Six Cyclone drills operating in Texas Flat and Montoya have, it is claimed, developed 18,000,000 dollars of commercial ore, sufficient to run the new mill over 20 years. A new drill has just been ordered that will reach a depth of 1000 feet. Over 300 men are on the pay roll. Even with present development the company is prepared to put out 4000 tons a day.

The concentrator is producing now over 250 tons of concentrates each month, besides which 25 tons of metallic copper are taken from the mine. In the Chino section the ore will be handled by steam shovels. The caving system will be employed in the underground mining, by running drifts and cutting the ores into large blocks for ready handling.

SOCORRO MINES IN MOGOLLON DISTRICT DOUBLE CAPACITY.

Pipe Line From White-Water Creek Will Supply Water to Pelton Water Wheels—Mogollon Mine Notes.

Mogollon, N. M., May 7.—The Socorro mines have advanced their development 125 feet and report 100 sacks of concentrates from 700 tons of ore milled. The most noteworthy feat by the management is doubling the capacity of the Burt filters so that they are now handling fully 100 tons per day.

The rumor that the grade up White-water creek, which was something like two-thirds, completed 18 months ago,

OPTIONS TAKEN IN CAMP CITY OIL SECTION

(Continued from page 9.)

owner in rich mines in Nevada, California and Arizona, with Oscar A. Turner, Ed. S. S. Turner, C. Conway, W. C. Walter, David Turner, A. S. Wiley and H. S. Turner, one of the wealthiest syndicates operating mines on the Pacific coast. They owned the famous Mitchell mine in Tonopah, which has yielded millions; and they are now opening up one of the greatest copper mines in Arizona. They have just purchased about 10,000 acres of hardwood timber lands south of Lexington, Ky., which is underlaid with a six foot seam of coal. The advent of wealthy and experienced men of this class in the Camp City oil fields augurs well for its future development. They are not going to sit idle and merely watch others bring out oil wells. With time is money and they want quick results.

Troxel Leases Claims.
There was also an important deal closed yesterday in which C. R. Troxel and associates took an option for a lease in perpetuity from George T. Kempe and associates on oil claims aggregating 400 acres three miles east of the oil well, the lessees to begin within six months drilling operations and in the event of striking oil in commercial kind and amount to erect tanks and pump pipes to the surface and to pay royalty of one-tenth of the gross output. The lessor reserves one valuable feature, viz. all wells of artesian water that may be found are to belong to him.

El Paso Company.
It is authoritatively stated that a company has been organized in El Paso to take over the present 40 acre claim owned by the Alamogordo Trust well company and sink the present oil well to 3000 feet depth. Two thousand dollars have been paid in the treasury, and it is expected by the middle of the week there will be ample means to proceed. Austin and Marr are the active promoters of this new company.

ARMY MAY FINISH RECLAMATION WORK
President Taft Said to Be Tired of Slowness of Civilians.

Says a Washington dispatch: President Taft is considering the advisability of completing the government reclamation project throughout the west by the use of army engineers.

In order to arm himself for a contingency wherein the civilian engineers at present in charge may be dropped he has caused the insertion of an article in the bill to increase the efficiency of the engineer corps which will permit him to detail any engineer officer for the inspection or supervision of any engineering project of the government.

It is reported that this provision is directly intended to apply to the reclamation service. If it goes into effect and it now appears that it will, the use of army engineers as an emergency measure will be numbered and his removal as the commanding officer of the irrigation project will follow soon after the close of the Ballinger-Pinchot investigation.

Taft Long Displaced.
It has been known for some time that president Taft has shared the discontent of Secretary Ballinger over the methods which have been employed in constructing the large dams and reservoirs in the west.

The success which has followed the detail of Lieut. Col. Goethals of the corps of engineers at Panama has been pointed out to the president as an example of what may be accomplished in connection with irrigation projects. In fact, he has been advised to sweep away the civil establishment and turn the projects over to the war department for completion in the same manner as the interoceanic canal is now being built.

It is figured that with an army engineer in authority, the erection of the projects will go forward with businesslike precision and rapidity.

The bill to increase the efficiency of the engineer corps recently passed the house. It passed the senate Wednesday with the amendment in question inserted. The provision will be kept in the bill provided the conferees can agree.

Whether under the plan of detailing an army engineer to supervise the projects the work of reclamation will be transferred to the war department will be left in the interior department which is a question yet to be considered.

THE GEOLOGY OF CAMP CITY FIELD

(Continued from page 9.)

This great valley are the most prodigious on the continent.

Petroleum Varies.
That petroleum varies in different fields is accounted for by the fact that in some regions the original material may have been plant, in other areas animal remains, thus producing hydrocarbons of different character. The different petroleum thus produced in the various fields are those principally paraffins, naphthenes and nitrogenous or sulphurated oils.

The oil first appears in a state of dissemination, but collectible in economic quantities. It must gather in proper channels, moved by gravitation or by hydrostatic pressure of waters behind or below it, or by the pressure of dissolved and compressed gases; and accumulate in porous rocks or cavities under layers of impervious material.

Many Instances of Oil.
According to the United States geological survey bulletin, the surface indications of petroleum common to oil fields in general are a seepage of oil; at shallow depths asphaltic substances; the sometimes found impregnating the soil, and the escape of gases, which is one of the most common of all evidences.

"To distinguish between gas from petroleum and other kinds of gases, it must be noted whether the bubbles are breaking in water leaves an oil film. If it does so, it may be regarded as evidence that the gas contains petroleum vapor, and is therefore the kind sought."—Bull. of United States geological survey.

Oil in economic quantities may not be below, however, as it is not always, though commonly, found where gas is.

J. R. Hunter, one of the operators of the drill at Camp City, N. M., has stated that "the oil is coming up all the time and from the gas bubbles, when they explode, oil floats around each bubble, leaving an oil film."

The escape of hydrogen sulphide, instead of sulphur and "sour" water, are phenomena often associated with petroleum fields.

Geologically the Franklin-Hueco-Sacramento-San Andres basin is ideal for a vast oil basin, as extensive as those of the Kern valley of California.

The structure of the rocks from which the petroleum is derived are anticlines, synclines, structural terraces and benches, arrested anticlines lenses, monoclines and in rocks associated with planes of faulting.

Water Impregnated With Oil.
In an old copper shaft north of Allamogordo, in eastern El Paso county, the vein is in schists; and in addition to its metallic copper contents, the water, which has impregnated the work, is strongly impregnated with petroleum. These schists were doubtless metamorphosed shales of the great carboniferous formation extending north into New Mexico.

When cheeks are thin and pale

Let Rosy Cheeks Reflect Your Health

it is time to pay attention to the warning that nature is giving. Before your condition is seriously anemic—before your blood is too thin and impoverished use

Pabst Extract
The Best Tonic
Infuse your blood with health and purity—bring back the bloom of youth to those thin pale cheeks.

The perfect combination of the tonic properties of choicest hops and the "building" qualities of pure barley malt in Pabst Extract make it the ideal remedy for pale, anemic, thin blooded people.

The United States Government specifically classifies Pabst Extract as an article of medicine—not a beverage.

RAIN FALLS AT DEL RIO; SETTLERS COME FROM NORTH

Del Rio, Texas, May 7.—A shower of rain fell, but merely enough to lay the dust. A good rain would do much good, though conditions are more satisfactory than last season.

Cinco de Mayo was celebrated by local Mexicans. The American part of the town was decorated with Mexican colors.

Newcomers from north Texas, Oklahoma, Kansas and other points are arriving daily. Considerable property is being sold.

District court is still in session.

Excelsior, king of motor cycles. Allen Arms and Cycle Co., agents.

Removal sale.—Snyder Jewelry Co.

JUAREZ ARMY MAN GOES TO LOWER CALIFORNIA.

Manuel G. Gonzalez, captain of the Mexican army at Juarez, stationed at the Juarez barracks, has been relieved by Capt. Julio Miramontes. Capt. Gonzalez, for many years a popular resident of the Mexican city, has been sent to lower California on a special commission.

Sulphur—The Best Skin Remedy

There is no drug or medicine that has been used for skin diseases as long as Sulphur. The trouble has been that sulphur in crude or powder form cannot be readily applied to the germ that causes Eczema, Tetter, Acne, Hives, Barber's Itch and the many other skin diseases. Little's Liquid Sulphur Compound overcomes this difficulty, being liquid, and if applied with soft brush reaches the seat of the trouble at once killing the germs and giving instant relief to intense itching caused by skin disorders. A few applications according to directions will cure any skin disease, no matter of what character. Send 10c for sample bottle. Rhuma-Sulphur Co., St. Louis, Mo.

AMUSEMENTS.

AT HAPPY HOUR.
Tonight and Sunday will be the last chance to see the famous 101 ranch picture at the Happy Hour theater. There will be new pictures and a complete change of program Monday, and the management promises the best vaudeville commencing Monday evening that it has yet given El Paso. "Watch The Happy Hour" evening for particulars.

The management promises the best vaudeville commencing Monday evening that it has yet given El Paso. "Watch The Happy Hour" evening for particulars.

THE BIBLE.
Sunday the Bijou will show a magnificent picture of the great Biblical story, "The Fall of Babylon." The management promises that this picture will create a sensation, and says it is undoubtedly the finest picture ever shown in El Paso. The story is dramatized from the fifth chapter of Daniel, and shows with marvelous accuracy all of the intense dramatic situations described in the Bible.

ENTERTAINMENT OPENS SANTA FE READING ROOM.
Y. M. C. A. in Charge of Exercises at Vaughn—New Grocery Store for Town—Residences Building.

Vaughn, N. M., May 7.—The Santa Fe reading rooms have been opened and a large crowd was entertained. The Gemunder orchestra of Chicago gave a program, and also played for the dance which followed. S. E. Busser, the Y. M. C. A. division superintendent, was present and promised frequent entertainments under the auspices of the association.

F. E. Ellsworth of Dawson, N. M., has leased a store building and will stock it with groceries.

S. Scholze is laying a foundation for an eight-room concrete dwelling.

C. H. Burlington, dispatcher for Santa Fe, has been transferred to Belin.

Mrs. J. C. Dicks of Albuquerque is visiting her mother.

Four Blind People Have Been Restored to Sight—One Man, One Lady and a Girl and Boy at the Dr. A. T. Still Osteopathic Infirmary, Dr. Ira W. Collins Physician in Chief.

The Girl Was Pronounced Hopeless by the Entire Medical Association of Texas When They Met Here in El Paso.

The Boy Had Been Doctored by Sixteen Specialists in El Paso and Different Cities.

They Were Cured by Loosening the Following Vertebrae.

How Many Drops of Poisonous Drugs Taken Three Times a Day After and Before Eating Could Have Ever Pushed Those Vertebrae Back?

It All Goes To Show That These Medical Guessers Don't Know Any More About Diseases, Than a Hog Does About Keeping the Sabbath.

Don't let these medical guessers scare you into an operation, for it shows they don't know what is the matter with you. They only want your money. Osteopathy cured 6000, only lost six, while poisonous drugs and the knife has laid out six thousand in the same length of time. Don't it make you shudder that any set of human beings would be so avaricious? The law ought to stop it. If osteopathy or any other kind of harmless way of treating diseases had a record like that they would have had them all in the penitentiary long ago.

Largest Run in Its History.

to have the nerves freed to the lungs just the same as these blind people did to their eyes.
It is the same in heart diseases, which are being cured every day.
They are congested at the spine and heart weakened by it.
Also, they do not know how to free the ribs in Asthma so the air can be expelled from the lungs and cause a vacuum to draw fresh air in.
That is why the Still Osteopath Infirmary is curing them every day, while drug doctors are helpless.
In Neuralgia and all kinds of headaches we loosen the nerve so it can cause circulation of blood and feed the nerve and you are well again.
Droves of them have been cured here in El Paso of stomach troubles and liver troubles, and indigestion.
Free the nerves and the circulation starts up and you are yourself again.
Rheumatism is only a congested nerve to some of the muscles.
I have never seen a case of any kind of rheumatism that was incurable by Osteopathy, and we have more cases, I suppose, than all the rest of the city.
In BRIGHT'S DISEASE, we free the nerves to kidneys and that is why, when we restore them to normal, they carry all the waste out of the system, and you are well again, and because the nerve was pressed on, and weakened had more poison to carry off than it was able to do why you cannot cure by putting in more poison and whipping up the already overworked nerves.
—FOR IT ALL GOES TO SHOW YOU CANNOT POISON A MAN AND CURE HIM OF ANY KIND OF DISEASE.
FOR NO AMOUNT OF POISONS WILL PUSH ONE OF THESE VERTEBRAE BACK IN PLACE.
It may stimulate you for the time, but will make your spine congested worse, and you will be worse the next time the stagnant blood accumulates in that organ.
DON'T SAY I DON'T SEE HOW AN OSTEOPATH COULD CURE ME.
JUST COME OVER AND SEE HOW WE DO IT.
WE'RE FROM MISSOURI, AND WE'LL SHOW YOU JUST HOW WE CURED SIX THOUSAND CASES AND ONLY LOST SIX WHILE THE PROFESSIONAL POISONERS LAID OUT SIX THOUSAND IN THE SAME LENGTH OF TIME.
FEEL YOUR OWN SPINE—THE TROUBLE IS THERE.
You can have no disease without the accumulating of stagnant blood, which is caused by the nerve deadening at the spine.
DR. A. T. STILL, OSTEOPATHIC INFIRMARY.
DR. IRA W. COLLINS, PHYSICIAN IN CHIEF.
